ABSTRACT CHROME

Tiffany Claborn

A licensed nail professional since 1996, Tiffany Claborn was more excited as a child by Wet n Wild glitter nail polish than toys and candy.

Starting her beauty career helping out in a tanning/nail salon during high school, Tiffany then enrolled at her local beauty school. With no nail program on offer, the school created one and Tiffany was its only student. Tiffany further built up her knowledge by reading *Nail Pro* magazines, watching CND's Jan Arnold on VHS and traveling to the nails-only show in Kansas City. With only one nail shop close by, at the age of 20, Tiffany opened a salon and began her career in nails.

Extremely passionate about education, Tiffany takes as many classes and camps as possible. An Artistic scholar, Wildflowers master artist and certified master pedicurist, Tiffany admits she's learned much from the USA's nail expert educator, Alisha Rimando. A great mentor, Tiffany loves trying out new products, learning new techniques, studying nail chemistry and as much nail science as she can uncover. Motivated by the concept that there's always more to learn, Tiffany aspires to be better and use education to boost her skills and confidence. An expert in salon business concepts, her strengths lie in the details of running a salon, building profits, standing out from the competition, customer service and her nail designs.

WHAT YOU NEED
UV/LED Chrome top coat, 4 colors of chrome powder, sponge applicator, black gel polish, white gel polish, UV/LED gel top coat, UV/LED gel base coat. Detail or striper brush.

APPLYING THE BASE COLOR

1 Polish the nail with black UV/LED gel polish and cure. Repeat step 1 for a second coat of color, then apply chrome UV/LED top gel and cure.

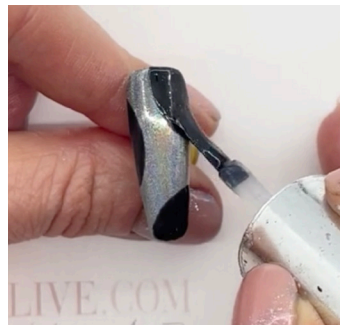

2 Apply chrome powder with sponge applicator and rub into the surface until it looks reflective. Apply top UV/LED gel over the chrome and cure.

CREATING THE DESIGN

3 Apply three semi-circular spots onto the nail with black UV/LED gel polish and cure.

4 Apply chrome UV/LED top coat to the black spots and cure.

5 Rub bright colors of chrome powder onto the black spots.

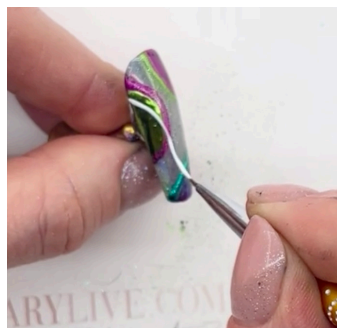

APPLYING THE DETAILS

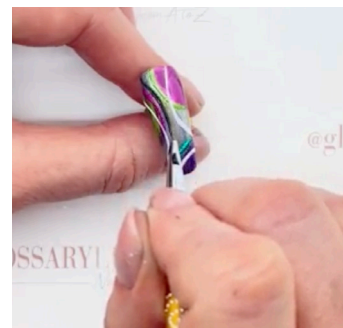

6 Use a striper or detailing brush with black UV/LED gel polish to create an outline around each semi-circle and cure. Cover each black line with chrome UV/LED top coat and cure.

7 Lightly apply chrome pigments onto the cured black lines, using a contrasting color to outline each semi-circle.

8 With white UV/LED gel polish, place random circular lines onto the nail, some smaller and some bigger than your original pops of color. Cure.

9 Add additional black lines, similar to the white lines in the previous step. Cure.

FINISHING

10 Apply UV/LED top coat and cure. Enjoy the final look.
